

SAMTIM Enterprises is excited to introduce **EULA™ Mobile Screen** (patent pending) to select markets - of which YOU are a key component. The proprietary optical panel of **EULA™ Mobile Screen** offers the trusted *SAMTIM* advantage of anonymity, without sacrificing the benefits of transparency – now with locking casters! From an administrative standpoint, this obfuscated transparency offers many legal advantages that our creative clientele are certain to appreciate – regardless of their own unique applications.

The engineered lenticular panel of **EULA™ Mobile Screen** acts to conceal select objects and individuals, offering a deployable mechanism capable of accelerating a variety of agendas. Drawing upon the legal precedents set by *End User License Agreements* and *Terms of Service* contracts, the presence of **EULA™ Mobile Screen** enforces compliance. In our contemporary condition where safety is paramount, **EULA™ Mobile Screen** is a timely infrastructural solution for entities looking to address the innumerable privacy concerns involved in essential business.

Whether you are a multinational corporation desiring to obfuscate perception of oppressive work conditions during routine inspection; a museum or art institution looking to simultaneously display and hide permanent collections of problematic artworks and artifacts; an airport whose Transportation Security Administration agents need to discreetly perform invasive searches; a High-Net-Worth Individual concealing identities to maintain public image; or any individual requiring creative framing to achieve their desired results; **EULA™ Mobile Screen** from *SAMTIM* is designed to be YOUR SOLUTION to YOUR PROBLEM – regardless of the optics!
