

SAMTIM – a registered B Corporation – is excited to introduce **EULA™ Mobile Screen** (patent pending) to advocates for justice. The proprietary optical panel of **EULA™ Mobile Screen** offers the trusted *SAMTIM* advantage of anonymity, without sacrificing the benefits of transparency. From an administrative standpoint, this obfuscated transparency offers many legal advantages that our creative clientele are certain to appreciate – regardless of their own unique applications.

The engineered lenticular panel of **EULA™ Mobile Screen** acts to protect the privacy of objects and individuals, offering a deployable mechanism capable of promoting a spectrum of positive social action. Drawing upon the legal precedents set by *End User License Agreements* and *Terms of Service* contracts, the presence of **EULA™ Mobile Screen** aids dissent. In our contemporary condition where equity for all is paramount, **EULA™ Mobile Screen** is a timely infrastructural solution for groups looking to emancipate the oppressed through participatory democracy.

Whether you are a citizen desiring to obfuscate perception of invasive facial recognition technologies; a civil rights group looking to simultaneously display and hide disruptive police activity during peaceful demonstrations; a health-care worker looking to discreetly perform HIPAA protected treatments in public; an activist concealing identities to prevent discriminatory retaliation; or any individual requiring creative framing to achieve their noble goals; **EULA™ Mobile Screen** from *SAMTIM* is designed to be a SOCIAL SOLUTION to SOCIAL PROBLEMS – deconstructing institutional optics!
